

PEACE ENESI

Lubbock, TX | penesi@ttu.edu | linkedin.com/in/peace-enesi | github.com/AhuoyizaEnesi

EDUCATION

Texas Tech University,

Bachelor of Science in Computer Science, Minor in Mathematics,

Relevant Coursework: Data Structures, Object-Oriented Programming, Computer Architecture, Software Engineering

Lubbock, TX

Expected Fall 2027

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java

Frontend: React, Next.js, React Native, Tailwind CSS

Backend & Data: Node.js, FastAPI, GraphQL, Prisma, REST APIs, PostgreSQL, WebSockets

AI & Agents: LLM Integration, Agentic Workflows, Agent Orchestration, MCP, LangChain, RAG, Claude Code

Infrastructure: Docker, Kubernetes, AWS, GitHub Actions, CI/CD

Testing: Unit Testing, Integration Testing

EXPERIENCE

SELT | Co-Founder & Full-Stack Engineer

Lubbock, TX

Campus marketplace platform | First Place, Red Raider Idea Competition

April 2024 - Present

- Built SELT from zero to production as the primary engineer, owning product design, frontend, backend services, APIs, database architecture, testing, deployment, and production operations.
- Built production workflows for listings, messaging, payments, identity verification, fraud prevention, and marketplace automation using React, Next.js, PostgreSQL, and REST APIs.
- Shipped and iterated on user-facing features across multiple campus deployments using real user behavior and feedback to improve product flows and reliability.
- Built AI-driven automation for pricing, fraud detection, and marketplace decisions using transaction and behavioral data.

NightShift AGI | AI Engineering Intern

Sunnyvale, CA

Remote | Kubernetes-native AI agent platform and task marketplace

June 2026 - Aug 2026

- Built production task-routing and orchestration systems for a Kubernetes-native AI agent platform, coordinating work across AI agents and humans.
- Built TypeScript and React product surfaces for agent execution, orchestration, and task-management workflows.
- Built automation connecting model outputs to task assignment, execution, and human handoff workflows.
- Built and maintained CI/CD pipelines with GitHub Actions, Docker, and Kubernetes to test and deploy production changes reliably.

Sponsors for Educational Opportunity

Remote

Software Engineering Intern

June 2025 - August 2025

- Built and shipped a full-cycle software project covering design, implementation, testing, code review, pair programming, and version-controlled delivery.
- Wrote 35+ unit tests, increasing code coverage from 62% to 91%.
- Built structured AI-assisted workflows for planning, implementation, debugging, testing, and code review.

PROJECTS

CodeClash | Python, Flask, WebSockets, PostgreSQL, Judge0

2nd HackWesTX | Top 3 Google x MLH AI Roadshow

- Built and shipped a real-time competitive coding platform using Python, Flask, WebSockets, PostgreSQL, and Judge0.
- Achieved sub-200 ms synchronization across 50+ concurrent matches and 99.5% execution success across 10,000+ submissions.
- Built backend execution workflows for concurrent code submission, evaluation, and result delivery.

IntelliSpeech | React, WebRTC, Socket.IO, ElevenLabs, Supabase

- Co-built a real-time communication platform using WebRTC and Socket.IO for low-latency peer communication.
- Solved out-of-order packet delivery and queue growth under load using resequencing buffers and backpressure controls.
- Integrated AI speech services into real-time application workflows.

SELT Multi-Campus Demo | Next.js, TypeScript, Tailwind CSS

test.app.seltapp.com

- Built a multi-tenant web platform spanning five university instances using Next.js, TypeScript, dynamic configuration, and subdomain routing.
- Implemented reusable components and per-campus configuration from one shared codebase.
- Designed the shared component and theming system so new campus experiences could be launched without rebuilding the product from scratch.
