

Peace Enesi

Lubbock, TX | penesi@ttu.edu | linkedin.com/in/peace-enesi | github.com/AhuoyizaEnesi

EDUCATION

Texas Tech University,

Bachelor of Science in Computer Science, Minor in Mathematics

Lubbock, TX

Expected Fall 2027

Relevant Coursework: Data Structures, Object-Oriented Programming, Software Engineering, Computer Architecture.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, SQL

Systems & Backend: Linux, Node.js, PostgreSQL, REST APIs, WebSockets, Docker, Kubernetes

Data & Infrastructure: ETL Pipelines, GitHub Actions, Supabase, Git

Frontend & Tools: React, Next.js, Tailwind CSS, Figma

EXPERIENCE

SELT | *Co-Founder & Full-Stack Engineer*

April 2024 - Present

Campus marketplace platform | First Place, Red Raider Idea Competition

- Built SELT end to end as the primary engineer, owning frontend, backend, database architecture, APIs, infrastructure, testing, and deployment for a live multi-campus marketplace.
- Built core systems for listings, messaging, checkout, identity verification, fraud prevention, and real-time marketplace operations using React, Next.js, PostgreSQL, and supporting backend services.
- Architected a two-tier distributed modeling system where campus-specific models process local marketplace data and feed a parent model used for cross-deployment pricing, fraud detection, and expansion decisions.

NightShift AGI | *AI Engineering Intern*

June 2026 - Present

Remote | Kubernetes-native AI agent platform and task marketplace

- Built production task-routing and orchestration systems that coordinate workloads across AI agents and human workers based on capabilities, requirements, and system constraints.
- Identified repetitive task-routing workflows and built AI-driven automation to eliminate manual assignment and prioritization across the marketplace.
- Built and maintained CI/CD workflows with GitHub Actions, Docker, and Kubernetes to test and deploy production features reliably across the platform.

Sponsors for Educational Opportunity

Remote

Software Engineering Intern

June 2025 - August 2025

- Built and shipped a full-cycle capstone project covering design, implementation, testing, code review, pair programming, and version-controlled delivery.
- Developed backend features and data workflows in Python, applying object-oriented design, algorithms, and collaborative software engineering practices.
- Wrote 35+ unit tests, increasing code coverage from 62% to 91%, while debugging features and contributing to engineering documentation and coding standards.

PROJECTS

CodeClash | *React, Flask, WebSockets, PostgreSQL, Judge0*

2nd HackWesTX | Top 3 Google x MLH AI Roadshow

- Built a real-time competitive coding platform in 24 hours, achieving sub-200 ms synchronization across 50+ concurrent matches.
- Integrated sandboxed code execution and judging workflows with 99.5% execution success across 10,000+ submissions.

IntelliSpeech | *React, WebRTC, Socket.IO, ElevenLabs, Supabase*

- Co-built a real-time voice platform for live cross-language communication using WebRTC, Socket.IO, ElevenLabs, and Supabase.
- Solved out-of-order packet delivery and queue growth under load using resequencing buffers and backpressure controls.

SELT Multi-Campus Demo | *Next.js, TypeScript, Tailwind CSS*

test.app.seltapp.com

- Built a multi-tenant test platform spanning five university instances using Next.js, TypeScript, subdomain routing, and dynamic configuration.
- Implemented shared components and per-campus runtime configuration so distinct deployments could run from one codebase without duplication.

ADDITIONAL EXPERIENCE

Pasoma AI | *Operations & Infrastructure Lead*

September 2025 - December 2025

- Built a multi-cloud infrastructure control plane across AWS, GCP, and Azure to automate deployment, monitoring, patching, and system health workflows.
- Built deployment and rollback automation across 50+ infrastructure operations with 95%+ test coverage.
